#1 How to design,
create, and support
dedicated languages
(DSLs)?

#2 How to transform
models/programs?

#3 How to manage
variability/variants?

#4 How do frameworks
internally work?

Plan

- Rappel Ingénierie des Exigences
 - Septembre 2017
 - Software Product Line Engineering
 - Feature Models
 - Defacto standard for modeling product lines and variability
- VaryLaTeX case
- The Jhipster case
 - An example of a real-world highly configurable system: how it is implemented and how we can model/test JHipster

Contract

- The idea of software product lines and variability
- Variability modeling
- Case studies

[] Tickless System (Dynamic Ticks)
[] High Resolution Timer Support
[] Symmetric multi-processing support
[] Support for extended (non-PC) x86 platforms
[] Single-depth WCHAN output
[] Paravirtualized guest support --->
[] Memtest
Processor family (Generic-x86-64) --->
Preemption Model (No Forced Preemption (Server)) --->
[] Reroute for broken boot IRQs (NEW)
[] Machine Check / overheating reporting
[] Dell laptop support
[] /dev/cpu/microcode - microcode support
[] /dev/cpu/*/msr - Model-specific register support
[] /dev/cpu/*/cpuid - CPU information support
Memory model (Sparse Memory) --->
[*] Sparse Memory virtual memmap (NEW)
[] Allow for memory hot-add (NEW)
[] Enable KSM for page merging
(4096) Low address space to protect from user allocation
[] Check for low memory corruption
[] Reserve low 64K of RAM on AMI/Phoenix BIOSen
-- MTRR (Memory Type Range Register) support
[] MTRR cleanup support
[] Enable seccomp to safely compute untrusted bytecode
[] Enable -fstack-protector buffer overflow detection (EXPERIMENTAL)
Timer frequency (250 HZ) --->
[] kexec system call

    dregs->dma_addr3 = (addr ) & 0xff;  
}  
.....
```

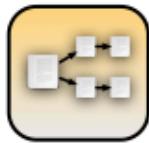

Replicate & Specialize

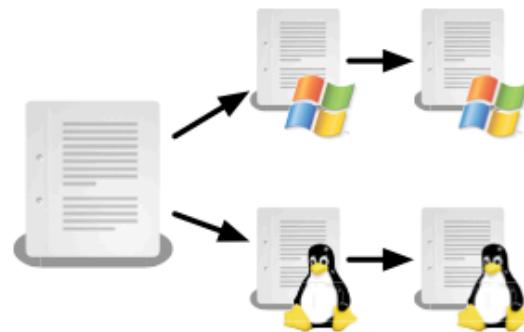

Clone to reuse and adapt existing solutions

- + Less effort needed
- Long-term cost outweighs short-term benefit
- ~ Cost of refactoring rises over time

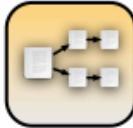

Platform Variations

**Clone existing code and fix
low level platform interaction**

- + Avoid complexity of virtualization layer
- Hard to propagate bug fixes
- ~ Ensure consistent behavior of all clones

Hardware Variations

Clone existing driver

- + No risk of changing existing driver
- Code growth
- ~ Dead code can creep into system

Inheritance (OOP)

Base Class encapsulate commonalities

Derive classes specialize peculiarities

Generic Programming

C++ template

```
template <typename T>
T max(T x, T y)
{
    return x < y ? y : x;
}
```

Generics in Java

```
public interface List<E> {
    void add(E x);
    Iterator<E> iterator();
}
public interface Iterator<E> {
    E next();
    boolean hasNext();
}
```

A screenshot of the Renault Vans website. The top navigation bar includes links for CARS, VANS, ELECTRIC VEHICLES, RENAULT BUSINESS, USED CARS, OWNER SERVICES, ABOUT RENAULT, and RENAULT SHOP. Below the navigation, a breadcrumb trail shows Renault UK > Renault Vans > New Kangoo Van Range > Kangoo Van > Build your own Kangoo Van > Selected Options. The main content area is titled 'NEW KANGOO VAN RANGE' and contains three tabs: '01 Preferences', '02 Version', and '03 Equipment & options'. Under 'OPTIONS', there are sections for 'COMFORT' (Central storage console & armrest between seats, £50.00), 'DRIVING' (Electric door mirrors, £0.00), and 'SAFETY & SECURITY' (ESC (Electronic Stability Control) with traction and understeer control, £200.00). To the right, a silver Renault Kangoo van is shown. The URL in the browser is www.renault.com/vans/build-your-own/kangoo-van-range/selected-options.

A screenshot of the Eclipse IDE. The central part shows a code editor with Java code for 'Notepad.java', 'Actions.java', and 'Main.java'. The code includes various annotations like @Override, @Data, and @Builder. The 'General' preferences panel is open on the left, showing settings for 'Always run in background', 'Keep next/previous editor, view and perspectives dialog open', and 'Show heap status' (which is checked). It also includes options for 'Open mode' (Double click or Single click) and 'Select on hover' or 'Open when'. A note at the bottom says 'Note: This preference is shared with the Java perspective'. The right side of the interface includes the 'Outline' and 'ASTView' panels, which show the structure and analysis of the selected code respectively. The URL in the browser is eclipseide.screencast.com/watch/14443805.

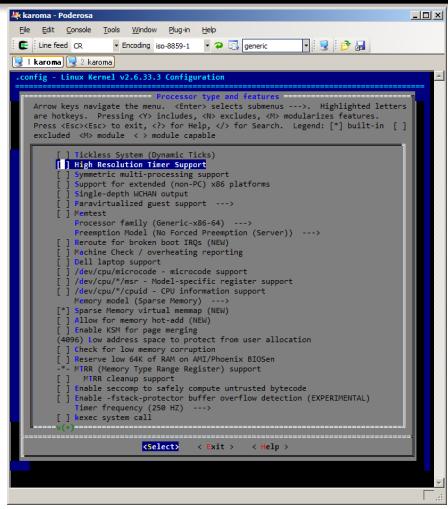

A photograph of an old, green-painted pickup truck that has been left to decay in a field. The truck is heavily rusted, particularly on the body and the front fenders. The driver's side door is open, revealing the interior frame and some remaining mechanical components. The truck is positioned in front of a dense thicket of green bushes and tall grass. In the bottom left corner, there are some wooden planks and metal debris, suggesting a construction or demolition site nearby.

 FFmpeg

```
VideoGen {  
    mandatory videoseq v1 "V1/v1.mp4"  
    optional videoseq v2 "v2folder/v2.mp4"  
    alternatives v3 {  
        videoseq v31 "v31.mp4"  
        videoseq v32 "v32.mp4"  
    }  
}
```

model-to-text

```
fmVideoGen = FM (VideoGen: v1  
[v2] v3; v3: (v31|v32); )
```

FAMILIAR

Product line and variability everywhere

- Your video generator is a product line
 - Generalization of Bref generator
 - It is even a configurable generator
 - There is an hidden feature model in every VideoGen specification
- Xtext is a configurable generator (see MWE2)
- JHipster is a product line
- ffmpeg is a product line

JHipster
